LE LAZY EDGE

DESKTOP · VERSION 0.2.0-BETA.1

QUICK START

The app is installed. These five pages take you from the first launch to a bot trading practice money in about ten minutes, and show you every lock that stands between a bot and real money.

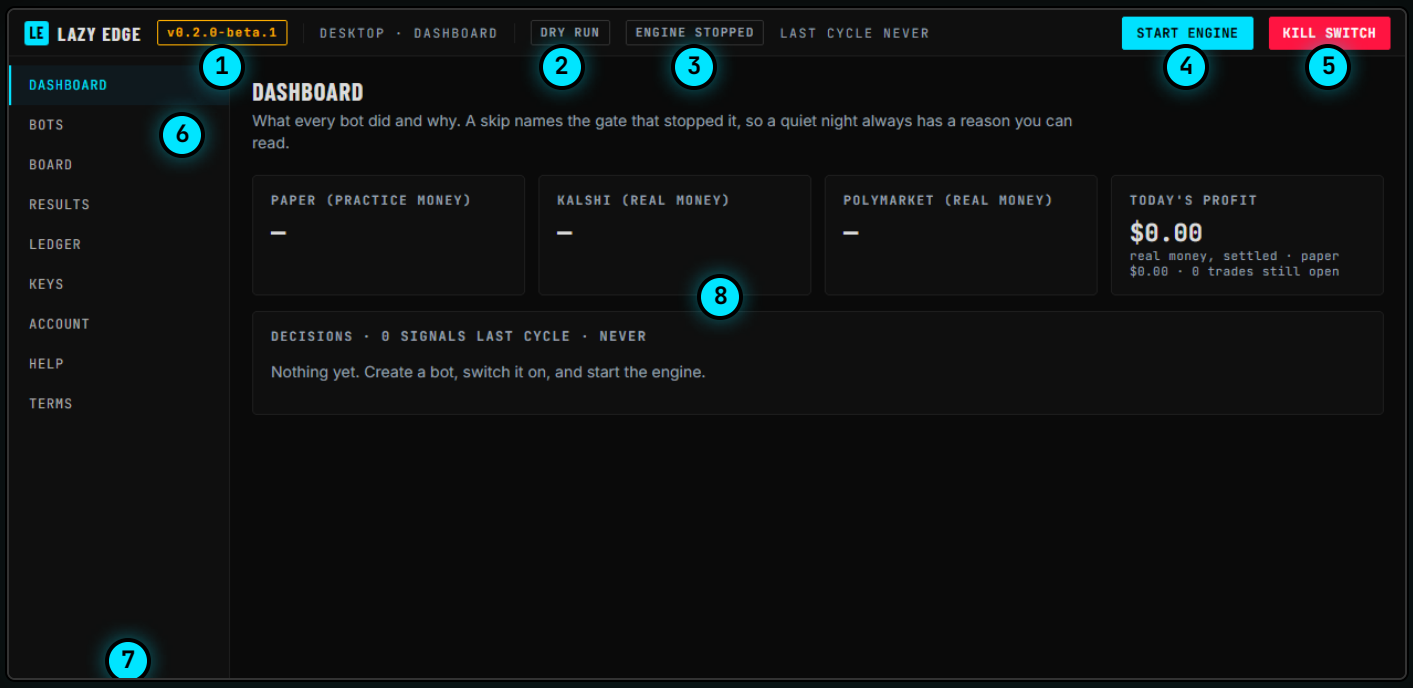

PAPER FIRST | DRY RUN ON | KILL SWITCH READY

01 · ORIENTATION

KNOW THE SCREEN

Everything important lives in the top bar, so you can always see whether the engine is running and whether real money is in play, whichever screen you are on.

THE DASHBOARD ON FIRST LAUNCH, BEFORE ANY BOT HAS RUN

1. **Version.** Quote it when you report a problem. Amber means beta.
2. **Money mode.** `DRY RUN` until you choose otherwise; `LIVE MONEY` once real orders can go out.
3. **Engine status** and how long ago it last checked the board.
4. `START ENGINE` runs every bot that is switched on. Press it again to stop.
5. `KILL SWITCH` stops every new live order at once and cancels resting ones. Paper keeps running.
6. **Screens.** Bots to configure, Board and Dashboard to watch, Results and Ledger to judge.
7. **Health light.** Green after a clean cycle, red after an error, grey while stopped.
8. **Balances, today's profit and every decision,** with the reason for each skip.

THREE LOCKS BETWEEN A BOT AND YOUR MONEY

Bot mode. Each bot is either Paper or Live. Paper trades a practice ledger against real order books. Every starter bot ships in Paper.

Dry run. An account wide switch. Live bots log the exact order they would place and send nothing until you set Account to Live and type LIVE.

Limits and kill switch. A $50 daily drawdown stop and $200 open exposure cap sit above every bot, and the kill switch is one click away.

02 · TEN MINUTES

YOUR FIRST PAPER RUN

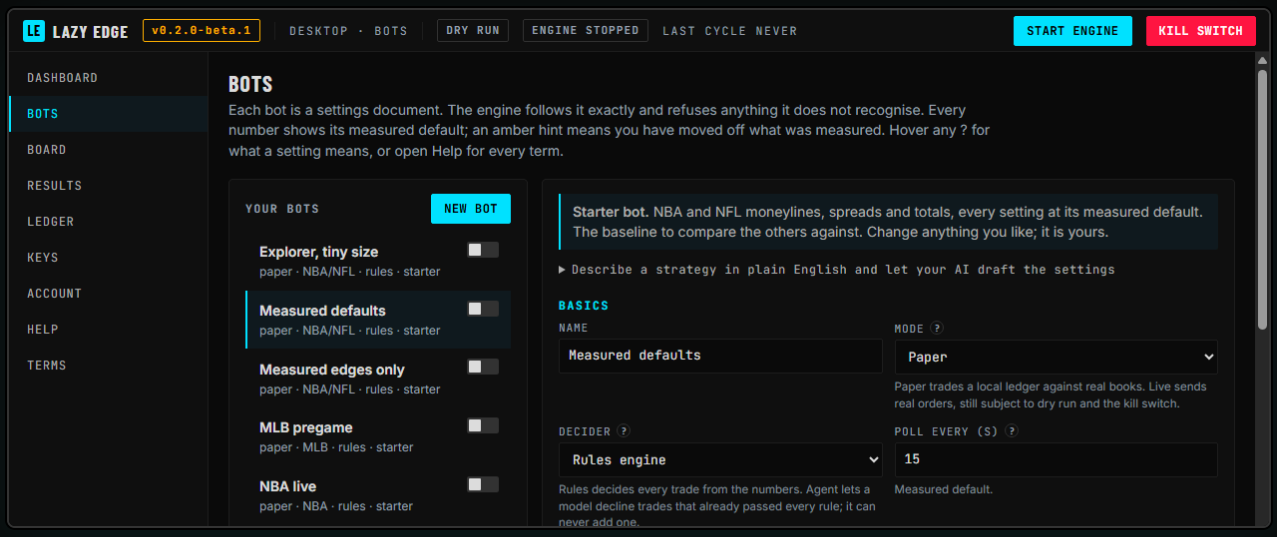

Paper trades practice money against the real order book, so you see exactly what a bot would do without risking a cent. Start here, whatever you plan to do later.

1 ACCEPT THE TERMS AND SIGN IN

On first launch, read the terms, tick each acknowledgement and choose I agree. Then sign in to your Lazy Edge account with an email code or your wallet. The app creates its own Lazy Edge key for this computer, so there is nothing to copy or paste. Your plan needs API access, which comes with a paid plan or 5 or more Lazy Lions in a linked wallet.

2 SWITCH ON A STARTER BOT

Open **Bots**. Seven starter bots are already in your list, all switched off and all in Paper. Flip the switch beside one to turn it on. **Measured defaults** is the best first choice, because every setting sits at its measured value and it is the baseline the others are compared against.

3 START THE ENGINE

Press **START ENGINE** in the top bar. The badge changes to Engine running and the health light turns green after the first clean cycle. Bots only trade while the app is open and the engine is running.

4 WATCH IT DECIDE

The **Dashboard** lists every decision as it happens. The **Board** shows every play Lazy Edge published, game by game, and what each of your bots would do with it, including bots that are switched off. A quiet night is normal: every skip names the check that stopped it.

03 · CHOOSE AND JUDGE

THE STARTER BOTS

Each bot is a settings document that the engine follows exactly. Run a few side by side in Paper and let Results tell you which one earns its place.

BOT	SPORTS	WHAT IT DOES
Measured defaults	NBA · NFL	Moneylines, spreads and totals with every setting at its measured default. The baseline to compare the others against.
Measured edges only	NBA · NFL	Only edges with a graded track record, a higher edge bar and half the trade size. Fewer trades, each backed by a measured record.
NBA live	NBA	In game moneylines and spreads. Refuses any price older than a minute and stops entering two minutes before the end.
NFL pregame	NFL	Moneylines, spreads and totals before kickoff, checked once a minute. No in game trading.
NFL hot plays	NFL	In game plays, only when a game event fires the play. Quiet most of a game by design.
MLB pregame	MLB	Moneylines and totals before first pitch, checked once a minute.
Explorer, tiny size	NBA · NFL	Every tradeable label at a lower edge bar and $2 a trade at most, so Results can show which labels and lanes are worth keeping.

Change any setting you like; a starter is yours once it is in your list. Every field shows its measured default, and an amber hint means you have moved off it. Delete a starter and you can add it back from the Starter bots panel.

READ WHAT HAPPENED

Results shows what won and what lost from your own settled trades, broken down by every setting. A pattern is only called winning or losing once it is unlikely to be luck, and results are judged by games, so a few lucky nights are not mistaken for a pattern. Use **Proven only** to keep just the fills backed by the real market record.

Ledger keeps every ticket. Click a row for its full audit trail. **Help** explains every term, and any `?` in the app does the same on hover.

SHARE A GOOD BOT

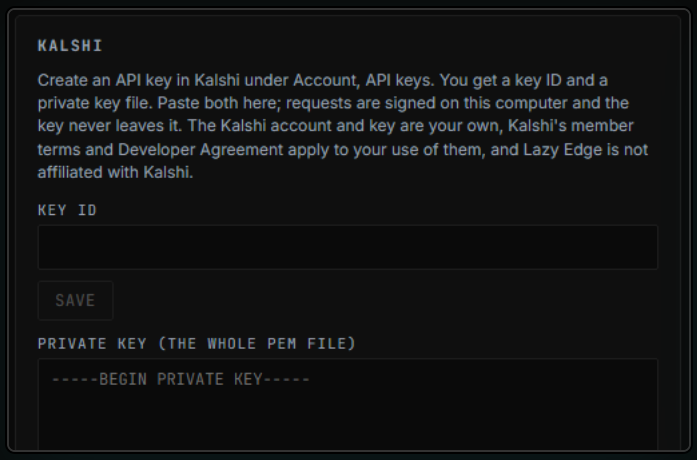

Found settings that work? Save the bot, press `SHARE` and copy the code. It is one line of text that holds settings only, never trades, balances or keys.

To use someone else's, open **Import a bot from a share code** on the Bots screen, paste it, choose `READ CODE` to see every change from the defaults, then add it. An imported bot always arrives switched off and in Paper.

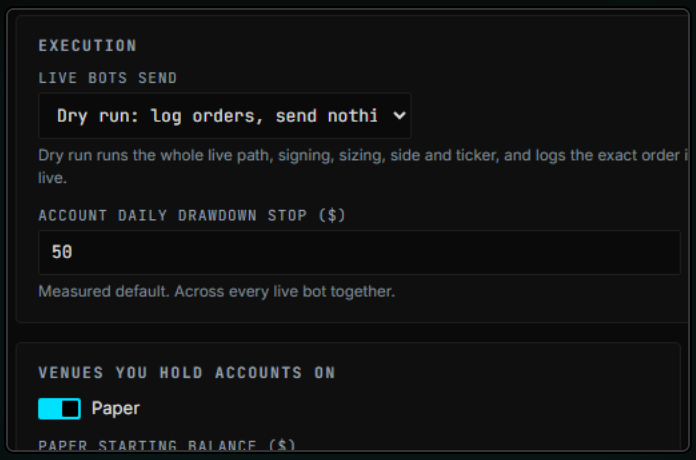

04 · ONLY WHEN YOU ARE READY

GOING LIVE

Prove a bot in Paper first, then in dry run, and only then let it send real orders.
Each step below is a separate, deliberate switch.

KEYS · ENCRYPTED BY WINDOWS, NEVER SHOWN AGAIN

ACCOUNT · DRY RUN, LIMITS AND VENUES

1. **Add your exchange key.** On **Keys**, paste your Kalshi key ID and private key file, or your Polymarket key, then press `TEST CONNECTION`. Keys are encrypted by Windows and are sent only to the venue they belong to. An AI key is optional and only needed for drafting strategies or agent mode.
2. **Switch the venue on.** On **Account**, turn on Kalshi or Polymarket under Venues you hold accounts on.
3. **Set a bot to Live and watch it in dry run.** In the bot's settings, change Mode to Live and save. With dry run still on, it logs the exact order it would place and sends nothing. Watch the Dashboard until you trust it.
4. **Turn dry run off.** On **Account**, set Live bots send to Live and type LIVE to confirm. Switching on any live bot asks you to confirm again.
5. **Keep the kill switch in reach.** One click stops every new live order and cancels resting ones. The daily drawdown stop and open exposure cap on Account apply across every live bot.

GOOD TO KNOW

Your settings, bots, ledger and keys live in `%APPDATA%\Lazy Edge` on this computer and are never uploaded. When a new version is out, the app tells you at startup; download it from the Releases page and your bots carry over.

Report a problem as an issue on github.com/Web3kaneco/lazy-edge-app with the version from the top bar. Never paste a key into an issue.

BETA SOFTWARE

Lazy Edge Desktop is unfinished and still being tested. It may contain faults that place, miss, size or price orders wrongly. Use it only with money you can afford to lose entirely; Lazy Edge is not responsible for funds lost using it.

Lazy Edge publishes data, not financial advice, and is not affiliated with Kalshi, Polymarket or any other venue. Their terms apply to your accounts.
